CSCE 531 Spring 2008
Quiz 10
Assigned Monday, 08-04-28

Consider McCarthy's `eval`, which starts

```
(defun eval. (e a)
  (cond
   ((atom a (assoc. e a))
```

What are the two arguments `e` and `a`?

Answer: `e` is an (S-)expression to be evaluated; `a` is an association list (also known as the environment for `e`).
