CSCE 146 Spring 2001

Quiz 4

Assigned Tuesday, 01/2/6

A bag differs from a set, because:

1. A bag is a Java class, while a set is a mathematical object.
2. A bag may contain multiple occurrences of the same element.
3. A bag always contains more than one object, while a set may be empty.
4. A bag is always implemented using an array.

Check all items that apply.
Answer: Two is the only one that applies.
