CSCE 330 Fall 2003

QUIZ 8

Assigned Thursday, 03-10-02

1. The r-value of a variable is the memory location associated with the variable.

   True or false?

   Answer: false.

2. With dynamic scope binding, the scope of a variable's name depends on the way a program is executed.

   With static (or lexical) scope binding, the scope of a variable's name depends on the way a program is written.

   True or false?

   Answer: true.
