CSCE 330 Fall 2004

Quiz 11

Assigned Thursday, 04-10-07

An activation record in the C2 language contains a return address (the "return point" or "return pointer") and storage for local variables. What other address is always present in an activation record in the C3 language? Is this an address in code memory or data memory?

Answer: The dynamic link, which is an address in data memory.
