

## CSCE 330 Fall 2013

### PROGRAM 5

Assigned Tuesday 2013-10-29. Due Tuesday 2013-11-05.

1. Write an fp function to add two vectors of the same length represented as sequences. Call the function *addv*. For example, `addv: <<1,2,3>, <1,2,3>>` should equal `<2,4,6>`.
2. Write an fp function to add any number of vectors of the same length represented as sequences. Call the function *addvs*. For example, `addvs: <<1,2,3>, <1,2,3>, <2,3,4>>` should equal `<4,7,10>`.
3. Write a function that tests whether its argument is zero. Call it *iszero*. So, for example, `iszero:1` is F, while `iszero:0` is T.

Test your programs using the fp interpreter written by Carter Bays and linked to the web site for our course to test your programs. Submit a hardcopy document with the three programs. No comments are required. Please note the interpreter has a bug concerning the use of numbers in function names: do not use number in function names.
