Software Developer: Full-Time Employee Job Description

We are looking for motivated and talented developers wanting to dive in and learn our software using ABAP programming. We are an SAP partner, building solutions for our customers. Don't stress over poorly written requirements documents. We are an agile development shop, where you will have direct access to the end user testing out your code. This means you will see, in a short amount of time the fruits of your labor. Our products save our end users hours per day from their normal process in the SAP modules of Plant Maintenance, Project System, and Procurement.

Key Areas of Responsibility:

- Learn SAP ABAP/4 programming techniques (we will train you)
- Maintain, seek and make improvements in our software
- Make enhancements in the software products as guided by customer requests.
- Work on new products within SAP
- Support the Customer Support Team with implementation help
- Manage software updates and additions in our tracking system

Qualifications:

- Computer Science Degree with an overall GPA of 3.2 or higher
- Proficient with Object Oriented Programming
- Previous software development experience through a job or internship

About Prometheus Group:

Founded in 1998, Prometheus Group continues to solve complex issues with simple, reliable processes.
