

Expressions

an expression in C, C++, or Modula-2
(including function calls), or:
addr @ len an array of *len* elements beginning at *addr*
{ type } @ addr a variable or function *nm* defined in *file*
\$ { type } a *type* read memory at *addr* as specified *type*
\$n most recent displayed value
\$n\$ nth displayed value
\$n\$- displayed value previous to \$
\$n\$-- last address examined with x
\$var value at address \$—
show values [n] show last 10 values [or surrounding \$n]
show conv display all convenience variables

Symbol Table

info address s show where symbol *s* is stored
info func [regex] show names, types of defined functions
(all, or matching *regex*)

info var [regex] show names, types of global variables (all,
or matching *regex*)

whatis [expr] show data type of *expr* [or \$] without
evaluating; **ptype** gives more detail
pctype [type] describe type, struct, union, or enum

GDB Scripts
source script read, execute GDB commands from file
script

define cmd create new GDB command *cmd*; execute
command-list script defined by *command-list*
end
document cmd create online documentation for new GDB
help-text
end

Signals

handle signal act specify GDB actions for *signal*:
print announce signal
noprint be silent for signal
stop halt execution on signal
nostop do not halt execution
pass allow your program to handle signal
nothrow do not allow your program to see signal
info signals show table of signals, GDB action for each

Debugging Targets

target type param connect to target machine, process, or file
help target display available targets
attach param connect to another process
detach release target from GDB control

Controlling GDB

set param value set one of GDB's internal parameters
show param display current setting of parameter
dir show dir
complaint limit number of messages on unusual symbols
conf rm on/off enable or disable cautionary queries
editing on/off control readline command-line editing
height lpp number of lines before pause in display
language lang language for GDB expressions (auto, c or
modula-2)
listsize n list size *n*
prompt str use *str* as GDB prompt
radix base octal, decimal, or hex number
verbose on/off representation
width cpl number of lines shown by list
write on/off Allow or forbid patching binary, core files
(when reopened with exec or core)
history ... groups with the following options:
h .. history
h exp off/on disable/enable readline history expansion
h file filename file for recording GDB command history
h size size number of commands kept in history list
h save off/on control use of external file for command
history

print ... groups with the following options:
p ... print
p address on/off print memory addresses in stacks, values
p array off/on compact or attractive format for arrays
p demangle on/off source (demangled) or internal form for
C++ symbols
p asm-dem on/off demangle C++ symbols in machine-
instruction output
p elements limit number of array elements to display
p object on/off print C++ derived types for objects
p pretty off/on struct display: compact or indented
p union on/off display of union members
p vtbl off/on display of C++ virtual function tables

show commands show last 10 commands
show commands n show 10 commands around number *n*
show commands + show next 10 commands

Working Files

file [file] use *file* for both symbols and executable;
with no arg, discard both
core [file] read *file* as coredump; or discard
exec [file] use *file* as executable only; or discard
symbol [file] use symbol table from *file*; or discard
load file dynamically link *file* and add its symbols
add-sym file adr read additional symbols from *file*,
dynamically loaded at *addr*
info files display working files and targets in use
path dirs add *dirs* to front of path searched for
executable and symbol files
show path display executable and symbol file path
info share list names of shared libraries currently
loaded

Source Files

air names add directory *names* to front of source
path
clear clear source path
show current source path

Parameters understood by set and show:

complaint limit number of messages on unusual symbols
conf rm on/off enable or disable cautionary queries
editing on/off control readline command-line editing
height lpp number of lines before pause in display
language lang language for GDB expressions (auto, c or
modula-2)
listsize n list size *n*
list - list *lines*
list llines line number [in named file]
[file]:function beginning of function [in named file]
+off display source surrounding *lines*, specified
as:
-off line number [in named file]
***address** line containing *address*
list f,l beginning of function [in named file]
info line num off lines previous to last printed
from line *f* to line *l*
rev regex compiled code for source line *num*
info source show name of current source file
info sources list all source files in use
forw regex search preceding source lines for *regex*

GDB under GNU Emacs

M-x gdb run GDB under Emacs
C-h m describe GDB mode
M-s stop one line (**step**)
M-n next line (**next**)
M-i step one instruction (**stepi**)
C-c C-f finish current stack frame (**finish**)
M-c continue (**cont**)
M-u up *arg* frames (**up**)
M-d down *arg* frames (**down**)
C-x & copy number from point, insert at end
C-x SPC (in source file) set break at point
