CSCE 330 Fall 2000

Quiz 12

Assigned Wednesday, 00/10/4

The *mystery1* program is used to build lexical analyzers. *Mystery1* is a preprocessor that produces *mystery2* code. In order to obtain a lexical analyzer, one must compile the output of the *mystery1* program with the *mystery2* compiler.

What are *mystery1* and *mystery2*?

Answer: lex and c.
