CSCE 330 Spring 2004

QUIZ 8

Assigned Thursday, 2004-03-04

An activation record in the C2 language contains a return address and storage for local variables. What other address is always present in an activation record in the C3 language? Is this an address in code memory or data memory?

Answer: The dynamic link (i.e., the base address of the caller's activation record); in data memory.
